#### Industrial Waste Discharge Permit

DATE: February 5, 1980	NO.	006-81-4
------------------------	-----	----------

NAME OF ORGANIZATION: Fairchild Camera & Instrument Corporation

ADDRESS: 464 Ellis Street, Mountain View, Calif. 94043

#### GENERAL CONDITIONS

- This permit is issued under the ordinances and regulations
  of the City of Mountain View currently in effect, but all
  discharges hereunder shall comply with all ordinances and
  regulations of the City and all other applicable local,
  state, and federal regulations, whether now in effect or
  hereafter adopted or amended.
- Any violation of the terms of this Permit or the ordinances or regulations of the City shall be grounds for revocation.
- 3. If any proposed revisions in plant operations are expected to cause significant changes in waste water quality or quantity (25 percent or more, or 25,000 gallons per day) from that given in approved Permit information, an application for an amended permit must be submitted for approval detailing the nature of the changes.
- 4. In accordance with Section 35.32.8 of the City Code, accidental discharges of industrial wastes shall be reported immediately to the Public Works Department, telephone number 907-7211, Ext. 270, during normal office hours, or to the Fire Department, telephone number 908-4415, on holidays or after normal office hours AND to the Palo Alto Regional Water Quality Control Plant, telephone number 329-2598 so that appropriate countermeasures may be taken.
- This Permit is not transferable without prior written consent of the Director of Public Norks. In general, a change of ownership will require a new permit.
- 6. The issuance of this permit does not constitute a warranty that the design capacity of the sewage collection and treatment system is sufficient to accommodate peak sewage flows from all dischargers who may now or hereafter be connected to the system. Pursuant to Sec. 35.32.1(d) the City reserves the right to impose restrictions on sewage discharges where necessary in the judgment of the City to assure the proper functioning in the sewerage system.

#### SPECIFIC CONDITIONS

	This permit is for a period ending on April 1, 1981	if significant pro-
	**************************************	gress has been made
	ALABAMAN MANAGAN MANAG	in reducing total
	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	'plant flow and approved pretreatment
•	This permit applies to industrial waste discharges at the following location(s) only:	
	464 Ellis Street	

Building No. 20

3. Your attention is called to the fact that flow rates shown on the permit application exceed per-acre design flows of the sewers serving the above locations. Restrictions or additional charges may be imposed in accordance with Sec. 35.32.1(d) of the City Code should peak sewage flows from the total upstream acreage approach the capacity of these sewers.

# ADDITIONAL INFORMATION REGARDING THE I.W. PERMIT FOR BUILDING 1. 2 & 3

- (1) The LIC relocation to Building 1 will remove production at Building 20, resulting in a transfer of water flow within the Mountain View complex (not a water flow increase).
- (2) The conversion from 3" to 4" wafers by LIC will result in a 44% increase in production with no increased labor or water usage.
- (3) A BPM group will move from Building 20 to the South San Jose facility in the second quarter of 1980, eliminating the flow from this operation.
- (4) The BPM operations that remain in Mountain View will convert from 3" to 4" wafers, resulting in a 44% production increase with no increased labor or water usage.
- (5) The Transistor group will be moving to the San Rafael facility, resulting in the elimination of flow from this operation.
- (6) A 6 month feasability study will be performed on 300 gpm D.I. Water reclaim and 600 gpm treated effluent reclaim.
- (7) Pending favorable completion of the feasability studies, construction of the above reclaim systems will take an estimated 2 years (depending upon economic climate).
- (8) The projected flow rates from the new system were based on peak water usage at full production rates, actual flow rates will be less.
- (9) The relocation of LIC at Building 1 will not be fully operational until 1-2 years after start-up.
- (10) Actual flow rates can only be measured after the system is installed.

  Loss of water via cooling towers is known to be significant.
- (11) Planning is under way to convert to 5" wafers. This would yield a 63% production increase over todays output without increasing labor or water usage.
- (12) The vast majority of construction projects at FC & I are based on technological advances to increase yields, not new production that requires more labor or water usage.
- (13) Even without the above, the new neutralization pit would not increase our total water discharge but would tend to only balance the discharge from two locations.

APPLICATION FOR INDUSTRIAL WASTES DISCHARGE PERMIT, ITEM C.

## Type of Industry and Nature of Products

Fairchild Semiconductor processes silicon metal into electronic semiconductor devices.

# Chemicals used in semiconductor device processing are;

•	Methanol
Nitrogen  Hydrogen  Oxygen Argon  Hydrochloric acid  Hydrochloric acid  Acetic acid  Phosphoric acid  Phosphoric acid  Ammonium fluorid  Ammonium hydroxi  Acetone	Isopropanol d Methylene chloride d Trichloroethane Detergents Aluminum sulfate sodium carbonate

#### Waste treatment facilities

Neutralization of acids is provided by injection of ammonia into mixing tanks with continuous monitoring and control. Fluoride solutions are captured and disposed of separately, not into the city sever.

iracteristics or exceptional industrial wastes. None.

No radioactive wastes are discharged.

Organic solvents are captured for storage and recycling.
